

CompCert C Compiler

CompCert is an optimizing C compiler which is formally verified, using machine-assisted mathematical proofs, to guarantee the absence of compiler bugs.

Its intended use is compiling safety-critical and mission-critical software written in C and meeting high levels of assurance. The code it produces is proved to behave exactly as specified by the semantics of the source C program.

The formal proof covers all transformations from the abstract syntax tree to the generated assembly code.

Key benefits

- The correctness proof of CompCert guarantees that all safety properties verified on the source code (e.g. by static analyzers or model checking) automatically hold for the generated code as well.
- On typical embedded processors, code generated by CompCert offers performance comparable to code generated by *GCC* at optimization level 1.

Supported C dialect

CompCert supports nearly all of the ISO C 99 standard and the following extensions:

- The `_Alignof` operator and the `_Alignas` attribute from ISO C 2011.
- Anonymous structures and unions from ISO C 2011.
- Pragmas and attributes to control alignment and section placement of global variables.

Supported targets

- PowerPC 32-bit (Signal Processing Extension *SPE* and Variable Length Encoding *VLE* are currently not supported)
- PowerPC 32-/64-bit hybrid (32-bit pointers, 64-bit integer computations, *SPE* and *VLE* are currently not supported)
- ARMv6 ISA with VFPv2 coprocessor (big or little endian)
- ARMv7 ISA with VFPv3-D16 coprocessor (big or little endian)
- ia32 (x86 32-bit, SSE2 extension required)
- AMD64 (x86 64-bit)

Supported tool chains

To preprocess and produce object and executable files, an external C preprocessor, assembler and linker have to be provided. CompCert is currently tested for compatibility with:

- GNU Compiler Collection version 4 or newer, version 4 or 5 is recommended
- Wind River Diab Compiler version 5 for PowerPC target architectures

Availability

- The source code and documentation of CompCert, including all proofs, can be downloaded from compert.inria.fr or github.com/AbsInt/CompCert. For research purposes, usage of CompCert is free of charge.
- AbsInt offers commercial licenses, provides industrial-strength support and maintenance, and contributes to the advancement of the tool.

About AbsInt

AbsInt provides advanced development tools for embedded systems, and tools for analysis, optimization and verification of safety-critical software. Our customers are located in more than 40 countries worldwide. We have distribution agreements with major software distributors in Asia, North America, Middle East, and throughout Europe.

Our headquarters

Science Park 1
66123 Saarbrücken, Germany
